

Reinvent ERP – SAP S4HANA Benefits

All know about the SAP and SAP S/4HANA is quickly becoming SAP's most successful ERP system. S/4HANA is that the 4th ERP suite developed by SAP. For over four decades, enterprise resource planning (ERP) software has been the core of SAP. So what's special about S/4HANA compared to the previous generations of SAP ERP systems? SAP S/4HANA's primary differentiator is its unique architecture which is quite a contrast from the classic relational database. It runs in-memory, with data stored in columns, allowing faster, accurate real-time analytics and compute capabilities. Most business users are conscious of the SAP S/4HANA benefits that are key value adds, but it also provides users with including, but not limited to; simplification and centralization to management and administration, simple use, cost-effectiveness, innovation, improved performance and speed, and an overall simple transition from on-premise to cloud.

Stepping far away from merely recording data, SAP/S4HANA focuses on providing end-users active decision support in real-time, that's data-driven and takes into consideration both internal and external sources of knowledge.

Most importantly, SAP S4/HANA allows organizations to figure seamlessly during a digital economy. This has been a key driving factor for various businesses using SAP ERP over the years, to significantly get thinking about the business benefits of S4HANA and make the choice of whether or not they should adopt this modernized ERP solution.

SAP has announced that it'll stop providing support for the legacy ECC systems from 2025 so although it does involve financial and technical risks, all customers- small, medium, and large should actively consider moving or planning a smooth transition into SAP S/4 HANA.

SAP's vision and strategy are to assist customers run simply, driving the right enterprise.

SAP S/4HANA allows you to:

- Reinvent business models
- Drive new revenues and profits
- Connect with customers through any channel to deliver value
- Access the web of Things and large Data
- Simplify your processes, drive them in real-time, and adapt instantly
- Gain insight into any data, in real-time – supporting instant deciding

SAP S/4HANA will simplify your IT landscape and reduce the cost of ownership (TCO), through:

- Reducing your data footprint
- Working with larger data sets in one system saving hardware costs, operational costs, and time
- Choice of deployment: cloud, on-premise, or hybrid to drive quick time-to-value
- Innovation is additionally made simple with an open platform (SAP HANA Cloud Platform) to drive advanced applications – for instance, predicting, recommending, and simulating – while protecting existing investments.

Here's detailing the major benefits or value adds SAP S/4 HANA provides for customers:

1. Simplification

SAP S/4HANA brings about immense simplification to the management and administration of the IT landscape – actually, simplicity is one of the key features SAP has brought in to its ECC application structure. SAP S/4HANA enables the centralizing of hardware and network resources, and is the digital core for business process simplification, by harnessing the facility of its HANA in-memory database. In older systems, enterprises often saw problems with multiple batch-run dependencies. Elimination of aggregate tables, reduced time interval, and therefore the ease with which your systems can answer transactions and queries.

2. simple use

Fiori 2.0, provides a contemporary design for a totally innovative user experience, enabling users to simply access Overview Pages, Work Lists, and List Reports. SAP Fiori's UI is meant specifically to be highly intuitive, personalized, responsive, and straightforward, which allows users to prompt questions and access required details, no matter device or deployment. this enables a corporation to evolve and eventually drive new revenues, connect with customers at a deeper level, access IoT and large Data, and most significantly, gain relevant insights into any data, in real-time, thereby supporting quick deciding.

3. Increased performance

S/4HANA enables improved performance by allowing you to plan, execute, generate reports and analytics supported live data, also as triggering period closing and providing improved predictions. It also enables your organization to supply better service for customer-centric applications. HANA offers increased contextual awareness and democratized data access.

4. Cost-effectiveness

Adopting S/4HANA may be a smart move, as far as cost efficiency is taken into account. you've got the power to compile all the analytical and transactional capabilities of a plethora of systems onto one location. this permits immensely better deciding.

5. Innovation

SAP S/4HANA sets the stage for future innovation. Technology is evolving rapidly, which suggests that merely 'keeping up' doesn't cut it anymore. Enterprises need to stay before the curve and make decisions that are future-ready. S/4 HANA applications leverage speed, context, and data accessibility like never before. it's also driving cloud adoption by businesses, a platform that enables organizations to deliver innovative solutions and widens the capabilities offered by S/4HANA itself.

6. Easy transition from on-premise to cloud

While we mention a cloud-based future, it's also important to notice that S/4HANA offers an easy transition to the cloud. Since a move to the cloud can happen at any time in a corporation, typically to scale back costs, this is often a crucial benefit for business leaders to think about.

Making the switch from traditional ERP solutions to SAP S/4HANA won't be a simple one. It requires deep thought and intensive evaluation of the advantages your organization can leverage, during a cutthroat, competitive business environment.

Some technical benefits to be considered from our perspective include:

- Support Acquisition Capability and Strategy
- Eliminate limitations in current technical architecture
- Digital core of S/4HANA allows companies to leverage newer technologies
- Provide the power to determine a uniform, more simplistic platform for standalone businesses
- Allow the power for improved integration, reporting, and communication across all standalone businesses

Cost Reduction & Flexibility

- By reverting complex customizations to plain functionality in SAP S/4HANA, the general implementation time is reduced
- Support costs for maintaining customizations are greatly reduced/eliminated

In moving to plain, the chance to leverage future SAP capabilities is more readily available

Streamlined Processes & Workflows

- Real value comes in streamlining processes into new workflows which leverage SAP S/HANA technology

Overall, the essential benefits of migrating or getting into the SAP S/4 HANA system for a customer using ECC is extremely high. there's definitely doubt whether a customer must completely switch to HANA or have a mixture of both ECC and HANA, except for better system performance and an overall improvement ineffectiveness, the sooner a customer switches to HANA the higher it's for them.

We realize a move to SAP S4HANA is a significant decision considering the implications to your business. We want to help you unlock new business value with SAP's Intelligent ERP and realize new benefits. If you want to understand our client success stories or have a conversation about implementing S/4HANA into your business model with a value-added partner.
